Multiple sclerosis Wikipedia

Multiple sclerosis (MS) is a demyelinating disease in which the insulating covers of nerve cells in the brain and spinal cord are damaged. This damage disrupts the ability of parts of the nervous system to communicate, resulting in a range of signs and symptoms, including physical, mental, and sometimes psychiatric problems.

Specific symptoms can include double vision, blindness in one eye

Multiple Sclerosis Lab Tests Online

Multiple sclerosis (MS) is a chronic disease that affects the central nervous system (CNS). It causes inflammation and the destruction of myelin. Myelin surrounds nerve fibers and acts like insulation on a wire, preventing "short-circuits" that divert a nerve signal from having its desired effects.

Multiple sclerosis Simple English Wikipedia the free

Multiple sclerosis (MS) is a serious health condition that gets worse over time. In this disease, the body's natural guard against illness (the immune system) damages fatty coverings called myelin sheaths around the nerve cells (neurons) in the central nervous system. The disease has different effects in different people, and can make people's bodies, eyesight, speech, and minds work poorly.
