Thyroid Hormone Treatment American Thyroid Association

THYROID HORMONE TREATMENT. Thyroid hormone is used in two situations: to replace the function of the thyroid gland, which is no longer functioning normally (replacement therapy) and to prevent further growth of thyroid tissue (suppression therapy). Suppression therapy is used primarily in patients with thyroid cancer to prevent recurrence or progression of their cancer.

Thyroid disease Wikipedia

Thyroid disease is a medical condition that affects the function of the thyroid gland. The thyroid gland is located at the front of the neck and produces thyroid hormones that travel through the blood to help regulate many other organs, meaning that it is an endocrine organ. These hormones normally act in the body to regulate energy use, infant development, and childhood development.
