Big Bang could end the universe with unstable Higgs boson

A group of Harvard physicists found that our universe is likely to end the way it began: with a Big Bang. The second Big Bang could be because of a change in the Higgs boson particle's mass that

Elementary particle Wikipedia

In particle physics, an elementary particle or fundamental particle is a subatomic particle with no sub structure, thus not composed of other particles. Particles currently thought to be elementary include the fundamental fermions (quarks, leptons, antiquarks, and antileptons), which generally are "matter particles" and "antimatter particles", as well as the fundamental bosons (gauge bosons

Observable universe Wikipedia

The observable universe is a spherical region of the Universe comprising all matter that can be observed from Earth at the present time, because electromagnetic radiation from these objects has had time to reach Earth since the beginning of the cosmological expansion. There are at least 2 trillion galaxies in the observable universe.

Book Review The Higgs Fake How Particle Physicists

* The Standard (particle) model says nothing about gravity or mass. Its no secret the particle standard model conflicts with General Relativity, a Gravity model, but it wasn t clear (to me) before that the Particle Standard Model ignores/avoids gravity. Apparently, there is no way to get mass (kilograms) to show up in Standard model equations.. Wow.
