Cisco Tutorial The Cisco Three Layered Hierarchical Model

By SemSim.com Cisco has defined a hierarchical model known as the hierarchical internetworking model. This model simplifies the task of building a reliable, scalable, and less expensive hierarchical internetwork because rather than focusing on packet construction, it focuses on the three functional areas, or layers, of your network:

OSI model Wikipedia

At each level N, two entities at the communicating devices (layer N peers) exchange protocol data units (PDUs) by means of a layer N protocol. Each PDU contains a payload, called the service data unit (SDU), along with protocol-related headers or footers.. Data processing by two communicating OSI-compatible devices is done as such: The data to be transmitted is composed at the topmost layer of
