## RELATED BOOK :

### **When to Prune Tree Care Tips Techniques at arborday org**

Summer Pruning. To direct the growth by slowing the branches you don't want; or to slow dwarf the development of a tree or branch, pruning should be done soon after seasonal growth is complete. The reason for the slowing effect is that you reduce the total leaf surface, thereby reducing the amount of food manufactured and sent to the roots.

### **Why When How to Prune Your Trees wcfb sailorsite net**

Otherwise, the best time to prune is in late winter, early spring, just before the tree begins to open its buds. Some trees, such as maple and dogwood, will bleed sap at this time of year. This bleeding should not harm them.

While pruning can be done anytime, it is always good to avoid hot dry periods and extreme winter cold.
