Dunbar's number Wikipedia

Dunbar's number is a suggested cognitive limit to the number of people with whom one can maintain stable social relationships in which an individual knows who each person is and how each person relates to every other person. This number was first proposed in the 1990s by British anthropologist Robin Dunbar, who found a correlation between primate brain size and average social

Prime number Wikipedia

A prime number (or a prime) is a natural number greater than 1 that cannot be formed by multiplying two smaller natural numbers. A natural number greater than 1 that is not prime is called a composite number. For example, 5 is prime because the only ways of writing it as a product, 1 5 or 5 1, involve 5 itself. However, 6 is composite because it is the product of two numbers (2 3) that

Deduction Induction Social Research Methods

In logic, we often refer to the two broad methods of reasoning as the deductive and inductive approaches.. Deductive reasoning works from the more general to the more specific. Sometimes this is informally called a "top-down" approach.
