### **Anaconda Snake Facts Diet Habitat Information**

Anaconda Snake. Anacondas are four species of aquatic boa inhabiting the swamps and rivers of the dense forests of tropical South America. The Yellow Anaconda can be found as far south as Argentina. It is unclear how the name originated so far from the snake's native habitat. It is likely due to its vague similarity to the large Asian pythons.

### **Green Anaconda Facts Snake Information**

Once an anaconda sights its target, it will grab the animal in its jaws, locking it in with its teeth. Once firmly grasped, the anaconda will coil around the prey and squeeze it until it dies of crushing or suffocation. It will then consume the carcass whole. For larger prey, the green anaconda can unhinge its jaw to stretch its mouth around the body.
