Persistent organic pollutant Wikipedia

Persistent organic pollutants (POPs) are organic compounds that are resistant to environmental degradation through chemical, biological, and photolytic processes. Because of their persistence, POPs bioaccumulate with potential adverse impacts on human health and the environment.

Persistent Organic Pollutants A Global Issue A Global

Persistent organic pollutants (POPs) are toxic chemicals that adversely affect human health and the environment around the world. Because they can be transported by wind and water, most POPs generated in one country can and do affect people and wildlife far from where they are used and released.

The POPs

Persistent Organic Pollutants (POPs) are organic chemical substances, that is, they are carbon-based. They possess a particular combination of physical and chemical properties such that, once released into the environment, they:

Persistent Organic Pollutants (POPs) Some chemicals are not only persistent and able to bioaccumulate in living organisms including humans, but are also able to travel long distances in air or ocean currents. These are called persistent organic pollutants (POPs) and are extremely nasty chemicals.
