Concatenating Row Values in Transact SQL Simple Talk

It is an interesting problem in Transact SQL, for which there are a number of solutions and considerable debate. How do you go about producing a summary result in which a distinguishing column from each row in each particular category is listed in a 'aggregate' column? A simple, and intuitive way of displaying data is surprisingly difficult to achieve.

Reading and Writing Files in SQL Server using T SQL

If you are using SQL Server 2000, then I m sorry to say you will be restricted to source code of 8000 characters, but I guessed that this routine would be more useful in SQL Server 2005 which has a native XML data type for which this routine would be ideal.
