A sample that shows Java Beans Servlets and JSP working

This tutorial shows the use of Java Beans, JSP and Servlet and how they work together. As an added bonus this tutorial also explains the use of nested properties of Java Beans using EL. The EL provides you with a simple mechanism to access nested properties of a JavaBean. For example, Listing below shows a JavaBean, which has a nested property of type Address

Applet Development Guide Oracle Help Center

12.2.1 Java Runtime Environment. With the Java Plug-in, applets are not run in the JVM inside the browser. Instead, they are executed in a separate process. The same JVM process can be shared between multiple applets, or applets can be placed into different processes depending on whether the existing JVMs match the applet requirements and have enough resources to execute the applet.
