Diving chamber Wikipedia

A diving chamber is a vessel for human occupation, which may have an entrance that can be sealed to hold an internal pressure significantly higher than ambient pressure, a pressurised gas system to control the internal pressure, and a supply of breathing gas for the occupants.. There are two main functions for diving chambers: as a simple form of submersible vessel to transport divers

Oxygen toxicity Wikipedia

Exposures, from minutes to a few hours, to partial pressures of oxygen above 1.6 bars (160 kPa) about eight times normal atmospheric partial pressure are usually associated with central nervous system oxygen toxicity and are most likely to occur among patients undergoing hyperbaric oxygen therapy and divers. Since sea level atmospheric pressure is about 1 bar (100 kPa), central nervous
