### **Cathodic protection Wikipedia**

Cathodic protection (CP) is a technique used to control the corrosion of a metal surface by making it the cathode of an electrochemical cell. A simple method of protection connects the metal to be protected to a more easily corroded "sacrificial metal" to act as the anode. The sacrificial metal then corrodes instead of the protected metal.

### **Corrosion Wikipedia**

Corrosion is a natural process, which converts a refined metal to a more chemically-stable form, such as its oxide, hydroxide, or sulfide. It is the gradual destruction of materials (usually metals) by chemical and/or electrochemical reaction with their environment. Corrosion engineering is the field dedicated to controlling and stopping corrosion.. In the most common use of the word, this

The interplay of inherent electrochemistry and surface species is investigated to maximize hydrogen production on amorphous MoS<sub>2</sub> across the pH spectrum. The most active HER species are found to be the S depleted molybdenum oxysulfide moieties, only stable in mildly acidic to neutral pHs (4 pH < 7).
