Hormone Wikipedia

A hormone (from the Greek participle , "to set in motion, urge on") is any member of a class of signaling molecules produced by glands in multicellular organisms that are transported by the circulatory system to target distant organs to regulate physiology and behavior. Hormones have diverse chemical structures, mainly of 3 classes: eicosanoids, steroids, and amino acid

Veins Posterior Fossa neuroangio org

This is a particularly daunting topic, requiring much time and material, which delayed the development of this section until recently. The posterior fossa venous system is highly variable and consequently suffers from highly decentralized nomenclature.

Mast cell Wikipedia

A mast cell (also known as a mastocyte or a labrocyte) is a type of white blood cell that contains many granules rich in histamine and heparin. Specifically, it is a type of granulocyte derived from the myeloid stem cell that is a part of the immune and neuroimmune systems . Although best known for their role in allergy and anaphylaxis, mast cells play an important protective role as well
