### **High Blood Pressure and Hypertensive Heart Disease**

High blood pressure may also bring on heart failure by causing left ventricular hypertrophy, a thickening of the heart muscle that results in less effective muscle relaxation between heart beats. This makes it difficult for the heart to fill with enough blood to supply the body's organs, especially during exercise,

### **High Blood Pressure National Heart Lung and Blood**

High blood pressure is a common disease in which blood flows through blood vessels, or arteries, at higher than normal pressures. Blood pressure is the force of blood pushing against the walls of your arteries as the heart pumps blood. High blood pressure, sometimes called hypertension, is when this force against the artery walls is too high.

### **Blood Pressure Heart failure and high blood pressure**

If you have high blood pressure, this means that your heart has to work harder to push blood round your body. To cope with this extra effort, your heart becomes thicker and stiffer, which makes it less able to do its job. If your heart is not able to pump as well as it should, this is called heart failure.
