Natural selection Wikipedia

Natural selection is the differential survival and reproduction of individuals due to differences in phenotype. It is a key mechanism of evolution, the change in the heritable traits characteristic of a population over generations. Charles Darwin popularised the term "natural selection", contrasting it with artificial selection, which is intentional, whereas natural selection is not.

Natural Selection and Biological Evolution dummies

By Rene Fester Kratz . Part of Biology For Dummies Cheat Sheet . When studying Biology, you ll hear about biological evolution, which refers to the change of living things over time. Charles Darwin concluded that biological evolution occurs as a result of natural selection, which is the theory that in any given generation, some individuals are more likely to survive and reproduce than others.

Sexual selection Wikipedia

Sexual selection is a mode of natural selection where members of one biological sex choose mates of the other sex to mate with (intersexual selection), and compete with members of the same sex for access to members of the opposite sex (intrasexual selection). These two forms of selection mean that some individuals have better reproductive success than others within a population, either from

Common Ancestry and Natural Selection in Darwin s Origin

Like Grant Ramsey, I am less perplexed by the structure of Darwin s Origin than Elliot Sober is. Indeed, I suspect that Sober s puzzles about the order in which natural selection and common ancestry are discussed are in part an artifact of an equivocation on natural selection.
