

FOOD GENES AND CULTURE

RELATED BOOK :

Genes Affect Culture Culture Affects Genes Psychology Today

I liked the article up until the final sentence, which I thought made no sense at all. If our 'experience in the world' is not a result of the interplay of our genes and our culture then what is it?

Dual inheritance theory Wikipedia

Dual inheritance theory (DIT), also known as gene culture coevolution or biocultural evolution, was developed in the 1960s through early 1980s to explain how human behavior is a product of two different and interacting evolutionary processes: genetic evolution and cultural evolution. Genes and culture continually interact in a feedback loop, changes in genes can lead to changes in culture

Genes An Open Access Journal from MDPI

Senescence is a stable cell cycle arrest that is either tumor suppressive or tumor promoting depending on context. Epigenetic changes such as histone methylation are known to affect both the induction and suppression of senescence by altering expression of genes that regulate the cell cycle and the senescence-associated secretory phenotype.

Animal culture Wikipedia

Animal culture describes the current theory of cultural learning in non-human animals through socially transmitted behaviors. The question as to the existence of culture in non-human societies has been a contentious subject for decades, much due to the inexistence of a concise definition for culture. However, many leading scientists agree on culture being defined as a process, rather than an
