Lithium ion battery Wikipedia

A lithium-ion battery or Li-ion battery (abbreviated as LIB) is a type of rechargeable battery in which lithium ions move from the negative electrode to the positive electrode during discharge and back when charging. Li-ion batteries use an intercalated lithium compound as one electrode material, compared to the metallic lithium used in a non-rechargeable lithium battery.

Lithium battery Wikipedia

Lithium batteries are primary batteries that have lithium as an anode. These types of batteries are also referred to as lithium-metal batteries. They stand apart from other batteries in their high charge density (long life) and high cost per unit. Depending on the design and chemical compounds used, lithium cells can produce voltages from 1.5 V (comparable to a zinc carbon or alkaline battery

Lithium Ion Polymer Cells High Energy High Power Kokam

Lithium-ion/Polymer batteries are preferred over conventional batteries considering limitations in space, weight, life-cycle costs, eco-friendliness, and overall performance. Due to the low internal resistance and optimal design for minimizing the loss, high efficiency of Kokam s cells reduces the total operating cost in a battery system.

Harding Energy Lithium Ion batteries Lithium Polymer

Lithium Ion (Li-Ion) cells have a negative electrode (anode) made from lithium compounds. Lithium is a highly reactive material and is much lighter than the hydrogen-absorbing metal alloy of the NiMH negative electrode.

12V 50AH Lithium Ion Battery Deep Cycle Engine Starting

The Smart Battery 12V 50AH Lithium Ion Battery is the perfect replacement from a AGM, GEL or Lead Acid Battery. The SB50 is designed as a "drop in replacement" meaning all you have to do is take out your old battery and place the Smart Battery in the same way. Smart Battery Lithium Ion Batteries are Green, Non Hazardous and have about 30% more energy density in the same size case as a lead battery.
