### **Cutting plant Wikipedia**

A plant cutting is a piece of a plant that is used in horticulture for vegetative (asexual) propagation. A piece of the stem or root of the source plant is placed in a suitable medium such as moist soil. If the conditions are suitable, the plant piece will begin to grow as a new plant independent of the parent, a process known as striking. A stem cutting produces new roots, and a root cutting

### **Anthurium Propagation By Stem Cuttings jaycjayc com**

Step 1 When the plant has grown too tall with leggy stems, cut off with a sharp knife the top crown of stem that includes its leaves and replant it into new potting media. Leave the remaining lower portion of the stem as is in the pot and with regular care, it will develop plantlets all along the nodes and even offshoots from the base as seen in the image.
