High blood pressure hypertension Symptoms and causes

Overview. High blood pressure is a common condition in which the long-term force of the blood against your artery walls is high enough that it may eventually cause health problems, such as heart disease. Blood pressure is determined both by the amount of blood your heart pumps and the amount of resistance to blood flow in your arteries.

High blood pressure Why me Harvard Health Blog

Some causes can't be prevented, like genetics and age. High blood pressure often runs in families. Genetic risk is complex, probably resulting from a combination of harmful mutations in risk genes and silencing of protective genes. There is nothing we can do to change our genetics, just as we can't stop aging.
