Multiple sclerosis Wikipedia

Multiple sclerosis (MS) is a demyelinating disease in which the insulating covers of nerve cells in the brain and spinal cord are damaged. This damage disrupts the ability of parts of the nervous system to communicate, resulting in a range of signs and symptoms, including physical, mental, and sometimes psychiatric problems. Specific symptoms can include double vision, blindness in one eye

Management of multiple sclerosis Wikipedia

Multiple sclerosis (MS) is a chronic inflammatory demyelinating disease that affects the central nervous system (CNS). Several therapies for it exist, although there is no known cure. The most common initial course of the disease is the relapsing-remitting subtype, which is characterized by unpredictable attacks followed by periods of relative remission with no new signs of disease activity.

Multiple sclerosis Simple English Wikipedia the free

Multiple sclerosis (MS) is a serious health condition that gets worse over time. In this disease, the body's natural guard against illness (the immune system) damages fatty coverings called myelin sheaths around the nerve cells (neurons) in the central nervous system. The disease has different effects in different people, and can make people's bodies, eyesight, speech, and minds work poorly.
