Alternatives to Statins for Lowering Cholesterol Healthline

Statins are prescription drugs designed to lower cholesterol. Statins function by inhibiting an enzyme needed to produce cholesterol in the liver. Without the help of that enzyme, your body cannot transform the fat you consume into cholesterol. Having too much cholesterol circulating in your arteries is dangerous because it can build up plaque.

Cholesterol Lowering Medications Side Effects of Statins

Nicotinic acid reduces LDL cholesterol levels by 10% to 20%, reduces triglycerides by 20% to 50%, and raises HDL cholesterol by 15% to 35%. Nicotinamide is a niacin by-product after it is broken down by the body. Nicotinamide does not lower cholesterol levels and should not be used in place of nicotinic acid.
