Wind power Wikipedia

A wind farm is a group of wind turbines in the same location used for production of electric power. A large wind farm may consist of several hundred individual wind turbines distributed over an extended area, but the land between the turbines may be used for agricultural or other purposes.

Wind turbine Wikipedia

A wind turbine, or alternatively referred to as a wind energy converter, is a device that converts the wind's kinetic energy into electrical energy.. Wind turbines are manufactured in a wide range of vertical and horizontal axis. The smallest turbines are used for applications such as battery charging for auxiliary power for boats or caravans or to power traffic warning signs.

Bergey Wind PowerBergey Wind Power Small Wind Turbines

Why Bergey? Bergey Windpower is the oldest and most experienced manufacturer of residential-sized wind turbines in the world. Thirty years ago Bergey pioneered the radically-simple Bergey design that has proven to provide the best reliability, performance, service life, and value of all of the hundreds of competitive products that have come and gone in that time.

Wind Power Alternative Energy

Wind Power. Wind power is produced by using wind generators to harness the kinetic energy of wind. It is gaining worldwide popularity as a large scale energy source, although it still only provides less than one percent of global energy consumption.

Wind turbines and the wind energy how much power is in

Wind Turbines and the Energy in Wind I like wind turbines. They're interesting to me, even the little ones. But the big ones, well, with apologies to Walt Whitman, "I can stand and look at them long and long".

DC PMA's PMG's hydrogen appliances

A LARGE extra heavy duty cooling fan must be used for all engine, hydro and or belt driven systems. Wind turbines usually have enough air circulation not to require a fan BUT you must determine this fact by testing and observation.

Steady power and efficiency curve for the Vestas V90 3mW turbine (109.4 dBA). The figure below shows the power curve and efficiency curve of the Vestas V90 offshore wind turbine taken from the WindPower program. These turbines are IEC IIA rated which means they are designed to operate in medium speed winds of around 8.5 metres/second.
