Fluorine Wikipedia

Fluorine is a chemical element with symbol F and atomic number 9. It is the lightest halogen and exists as a highly toxic pale yellow diatomic gas at standard conditions. As the most electronegative element, it is extremely reactive, as it reacts with almost all other elements, except for helium and neon.. Among the elements, fluorine ranks 24th in universal abundance and 13th in terrestrial

Chalcogen Wikipedia

The chalcogens (/ k l k d n z /) are the chemical elements in group 16 of the periodic table. This group is also known as the oxygen family. It consists of the elements oxygen (O), sulfur (S), selenium (Se), tellurium (Te), and the radioactive element polonium (Po). The chemically uncharacterized synthetic element livermorium (Lv) is predicted to be a chalcogen as well.

Sulfites in beer reviewing regulation analysis and role

Sulfur dioxide dissolves fairly readily in water to give a rather complicated reaction mixture, strongly dependent on concentration, temperature and pH (Senning, 1982). Therefore, the concentration of each of the different forms is a function of the pH medium and is determined by the equilibrium constants K_1 ($1.6 \times 10^{-2} \text{ mol dm}^{-3}$) and K_2 ($1.0 \times 10^{-7} \text{ mol dm}^{-3}$).
