

IPS SYSTEMS

RELATED BOOK :

Intrusion detection system Wikipedia

An intrusion detection system (IDS) is a device or software application that monitors a network or systems for malicious activity or policy violations. Any malicious activity or violation is typically reported either to an administrator or collected centrally using a security information and event management (SIEM) system. A SIEM system combines outputs from multiple sources, and uses alarm

IP address Wikipedia

An Internet Protocol address (IP address) is a numerical label assigned to each device connected to a computer network that uses the Internet Protocol for communication. An IP address serves two principal functions: host or network interface identification and location addressing.. Internet Protocol version 4 (IPv4) defines an IP address as a 32-bit number.
