Bone Vascular supply and circulation Britannica com

Vascular supply and circulation. In a typical long bone, blood is supplied by three separate systems: a nutrient artery, periosteal vessels, and epiphyseal vessels. The diaphysis and metaphysis are nourished primarily by the nutrient artery, which passes through the cortex into the medullary cavity and then ramifies outward through haversian and Volkmann canals to supply the cortex.

Feedback regulation mechanisms of endocrine signaling

Human endocrine system - Feedback regulation mechanisms of endocrine signaling: A constant supply of most hormones is essential for health, and sustained increases or decreases in hormone production often lead to disease. Many hormones are produced at a relatively constant rate, and in healthy individuals the day-to-day serum concentrations of these hormones lie within a rather narrow normal
