Galapagos Animals Wildlife Animals in Galapagos Islands

The Galapagos islands have a low biodiversity (that is, few animal species), because the islands are 600 miles (1000 km) from the continent. This huge expanse of inhospitable ocean in-between makes it very difficult for new kinds of plants and animals to reach the islands.

Charles Darwin Foundation

Twenty Galapagos bird species, including 12 species of Darwin s finches, are under threat from a parasitic fly, *Philornis downsi*. This fly was accidentally introduced to Galapagos and is seriously affecting the survivorship of several Galapagos birds including the critically endangered Mangrove Finch.
