Human factors and ergonomics Wikipedia

Human factors and ergonomics (commonly referred to as human factors) is the application of psychological and physiological principles to the (engineering and) design of products, processes, and systems. The goal of human factors is to reduce human error, increase productivity, and enhance safety and comfort with a specific focus on the interaction between the human and the thing of interest.

User centered design Wikipedia

Needs and emotions. The term user-centered design was coined in Donald A. Norman's research laboratory in University of California, San Diego. The concept became widely popular after the publication of the book "User-Centered System Design: New Perspectives on Human-Computer Interaction" in 1986. The concept gained further attention and acceptance in his seminal book "The Design of Everyday
