Geometry Wikipedia

Geometry (from the Ancient Greek: ; geo-"earth", -metron "measurement") is a branch of mathematics concerned with questions of shape, size, relative position of figures, and the properties of space. A mathematician who works in the field of geometry is called a geometer.. Geometry arose independently in a number of early cultures as a practical way for dealing with lengths

Curl mathematics Wikipedia

The curl of a vector field F , denoted by $\text{curl } F$, or F , or $\text{rot } F$, at a point is defined in terms of its projection onto various lines through the point. If n is any unit vector, the projection of the curl of F onto n is defined to be the limiting value of a closed line integral in a plane orthogonal to n divided by the area enclosed, as the path of integration is contracted around

Projective geometry Britannica com

Projective geometry: Projective geometry, branch of mathematics that deals with the relationships between geometric figures and the images, or mappings, that result from projecting them onto another surface. Common examples of projections are the shadows cast by opaque objects and motion pictures displayed on a screen.

Logistic Equation from Wolfram MathWorld

Logistic Equation. The logistic equation (sometimes called the Verhulst model or logistic growth curve) is a model of population growth first published by Pierre Verhulst (1845, 1847). The model is continuous in time, but a modification of the continuous equation to a discrete quadratic recurrence equation known as the logistic map is also widely used.
