

PEDIATRIC CARDIAC CATHETERIZATION

RELATED BOOK :

Cardiac Catheterization Conditions and Treatments

Cardiac catheterization is a specialized procedure in which a long, flexible tube (catheter) is inserted into a blood vessel (usually in the leg) and guided into the heart, allowing a close look at the structures inside. Cardiac catheterization may be recommended for diagnostic purposes, with the intent of obtaining information only.

Pediatric Cardiac Catheterization Test Treatment Uses

Cardiac catheterization is a procedure that involves puncturing an artery and / or vein, usually located in the groin, so that a small, long, flexible tube (catheter) can be guided into the heart and major vessels around the heart. The catheter is moved through the heart with the aid of fluoroscopy (X-ray machine).
