Securing Your Wireless Network Consumer Information

Use Encryption on Your Wireless Network. Once you go wireless, you should encrypt the information you send over your wireless network, so that nearby attackers can't eavesdrop on these communications. Encryption scrambles the information you send into a code so that it's not accessible to others.

What is Wireless Network Security Definition from

Typically, wireless network security is delivered through wireless devices (usually a wireless router/switch) that encrypts and secures all wireless communication by default. Even if the wireless network security is compromised, the hacker is not able to view the content of the traffic/packet in transit.
