Activated Carbon What is Activated Carbon Benefits

Activated carbon is a carbonaceous, highly porous adsorptive medium that has a complex structure composed primarily of carbon atoms. The networks of pores in activated carbons are channels created within a rigid skeleton of disordered layers of carbon atoms, linked together by chemical bonds, stacked unevenly, creating a highly porous structure

Manufacturing Carbon Activated Corporation

Activated carbon is produced from coconut shells, wood, coal and other carbonaceous sources. During the activation process, pure carbon is extracted from these materials by a superheating method known as pyrolysis. Throughout the manufacturing process, samples are collected at various stages and tested for quality in our labs.
