Ecology Wikipedia

Ecology; Ecology addresses the full scale of life, from tiny bacteria to processes that span the entire planet. Ecologists study many diverse and complex relations among species, such as predation and pollination. The diversity of life is organized into different habitats, from terrestrial (middle) to aquatic ecosystems.

Ecological systems theory Wikipedia

Ecological systems theory, also called development in context or human ecology theory, identifies five environmental systems with which an individual interacts. The theory offers a framework through which community psychologists examine individuals' relationships within communities and the wider society. Ecological systems theory was developed by Urie Bronfenbrenner.
