Uncertainty reduction theory Wikipedia

The uncertainty reduction theory, also known as initial interaction theory, developed in 1975 by Charles Berger and Richard Calabrese, is a communication theory from the post-positivist tradition. It is one of the only communication theories that specifically looks into the initial interaction between people prior to the actual communication process. The theory asserts the notion that, when

Communication theory and its applications in nursing and

Communication models have evolved from the first rudimentary model by Shannon and Weaver in 1949, which described transmission. This linear model was fairly mechanistic, and basically reflected the idea that the sender and receiver had little to do with the interpretation of the message, which was essentially independent.
