RELATED BOOK :

Compound interest Wikipedia

Compound interest is the addition of interest to the principal sum of a loan or deposit, or in other words, interest on interest. It is the result of reinvesting interest, rather than paying it out, so that interest in the next period is then earned on the principal sum plus previously accumulated interest.

Interest Wikipedia

Compound interest includes interest earned on the interest which was previously accumulated. Compare for example a bond paying 6 percent biannually (i.e., coupons of 3 percent twice a year) with a certificate of deposit which pays 6 percent interest once a year. The total interest payment is \$6 per \$100 par value in both cases, but

the holder of the biannual bond receives half the \$6 per year
