Dust collector Wikipedia

A dust collector is a system used to enhance the quality of air released from industrial and commercial processes by collecting dust and other impurities from air or gas. Designed to handle high-volume dust loads, a dust collector system consists of a blower, dust filter, a filter-cleaning system, and a dust receptacle or dust removal system.

Dust Collection Research Home

Summary. This site shares fine dust risks and how to effectively protect yourself and those close to you from airborne dust hazards. These pages provide far more detail than my Dust Collection Basics Blog that provides a quick overview. Most large woodworking facilities vent their dust collection systems outside, so fine dust exposure is limited to the dust being made.
