History of Unix Wikipedia

The history of Unix dates back to the mid-1960s when the Massachusetts Institute of Technology, AT&T Bell Labs, and General Electric were jointly developing an experimental time sharing operating system called Multics for the GE-645 mainframe. Multics introduced many innovations, but had many problems.. Bell Labs, frustrated by the size and complexity of Multics but not the aims, slowly pulled

Unix time Wikipedia

Unix time (also known as POSIX time [citation needed] or UNIX Epoch time) is a system for describing a point in time. It is the number of seconds that have elapsed since 00:00:00 Thursday, 1 January 1970, Coordinated Universal Time (UTC), minus leap seconds. Every day is treated as if it contains exactly 86 400 seconds, so leap seconds are to be subtracted since the epoch.

UNIX timestamp epoch batch converter timestamp generator

The Unix time (or Unix epoch or POSIX time or Unix timestamp) is a system for describing points in time, defined as the number of seconds elapsed since midnight proleptic Coordinated Universal Time (UTC) of January 1, 1970, not counting leap seconds. It is widely used not only on Unix-like operating systems but also in many other computing systems and file formats.

Epoch Converter Unix Timestamp Converter

What is epoch time? The Unix epoch (or Unix time or POSIX time or Unix timestamp) is the number of seconds that have elapsed since January 1, 1970 (midnight UTC/GMT), not counting leap seconds (in ISO 8601: 1970-01-01T00:00:00Z). Literally speaking the epoch is Unix time 0 (midnight 1/1/1970), but 'epoch' is often used as a synonym for 'Unix time'.
