### **Fine Motor Skills Encyclopedia of Children's Health**

Motor skills are actions that involve the movement of muscles in the body. They are divided into two groups: gross motor skills , which include the larger movements of arms, legs, feet, or the entire body ( crawling , running, and jumping); and fine motor skills, which are smaller actions, such as grasping an object between the thumb and a finger or using the lips and tongue to taste objects.

### **Motor skill Wikipedia**

A motor skill is a learned ability to cause a predetermined movement outcome with maximum certainty. Motor learning is the relatively permanent change in the ability to perform a skill as a result of practice or experience. Performance is an act of executing a motor skill. The goal of motor skills is to optimize the ability to perform the skill at the rate of success, precision, and to reduce

### **Gross motor skill Wikipedia**

Gross motor skills are the abilities usually acquired during childhood as part of a child's motor learning. By the time they reach two years of age, almost all children are able to stand up, walk and run, walk up stairs, etc. These skills are built upon, improved and better controlled throughout early childhood, and continue in refinement throughout most of the individual's years of development
