Yawn Wikipedia

A yawn is a reflex consisting of the simultaneous inhalation of air and the stretching of the eardrums, followed by an exhalation of breath.. Yawning (oscitation) most often occurs in adults immediately before and after sleep, during tedious activities and as a result of its contagious quality.It is commonly associated with tiredness, stress, sleepiness, or even boredom and hunger.

Suicide 1897 Durkheim Home Page

Social Causes and Social Types. Durkheim's argument so far is a perfect example of his characteristic "argument by elimination" -- the systematic rejection of alternative explanations of a given phenomenon in order to lend authority to the "sole remaining" candidate. 12 He thus claimed to have shown that, for each social group, there is a specific tendency to suicide that can be explained
