System administrator Wikipedia

A system administrator, or sysadmin, is a person who is responsible for the upkeep, configuration, and reliable operation of computer systems; especially multi-user computers, such as servers. The system administrator seeks to ensure that the uptime, performance, resources, and security of the computers they manage meet the needs of the users, without exceeding a set budget when doing so.

Administering Oracle Scheduler

For example, users SYS and SYSTEM are granted the DBA role. You can grant this role to another administrator by issuing the following statement: GRANT SCHEDULER_ADMIN TO username; Because the SCHEDULER_ADMIN role is a powerful role allowing a grantee to execute code as any user, you should consider granting individual Scheduler system privileges instead.
