Network Administration Structure of Active Directory

The terms object, organizational unit, domain, tree, and forest are used to describe the way Active Directory organizes its directory data. Like all directories, Active Directory is essentially a database management system. The Active Directory database is where the individual objects tracked by the directory are stored.

Defining Terms What Is a Directory Service dummies

Here is one definition for a directory service: A directory service is a customizable information store that functions as a single point from which users can locate resources and services distributed throughout the network. This customizable information store also gives administrators a single point for managing its objects and their attributes.
