How code linting will make you awesome at Python dbader org

In Python code reviews I've seen over and over that it can be tough for developers to format their Python code in a consistent way: extra whitespace, irregular indentation, and other sloppiness then often leads to actual bugs in the program.

How to execute Python code from within Visual Studio Code

Visual Studio Code was recently released and I liked the look of it and the features it offered, so I figured I would give it a go.. I downloaded the application from the downloads page fired it up, messed around a bit with some of the features and then realized I had no idea how to actually execute any of my Python code!. I really like the look and feel/usability/features of Visual Studio

Improving your code with modern idioms Supporting Python

Python 2.4 has a new built-in, `sorted()`, that will return a sorted list and takes the same parameters as `.sort()`. With `sorted()` you often can avoid the temporary variable. It also will accept any iterable as input, not just lists, which can make your code more flexible and readable.
