What Is Class D Amplification Sound on Sound

Even so, the efficiency of a practical Class-D amplifier can be better than 90 percent, which is significantly better than a Class-AB design (78.5 percent at best and typically closer to 50 percent). Coming full circle, because a Class-D amplifier is more efficient than the conventional Class-AB one, it can be lighter.

Amplifier Classes and the Classification of Amplifiers

Class D Amplifier A Class D audio amplifier is basically a non-linear switching amplifier or PWM amplifier. Class-D amplifiers theoretically can reach 100% efficiency, as there is no period during a cycle where the voltage and current waveforms overlap as current is drawn only through the transistor that is on.
