Heart failure Wikipedia

Terminology. Heart failure is a pathophysiological state in which cardiac output is insufficient to meet the needs of the body and lungs. The term "congestive heart failure" is often used, as one of the common symptoms is congestion, or build-up of fluid in a person's tissues and veins in the lungs or other parts of the body.

Specifically, congestion takes the form of water retention and

Congestive Heart Failure Symptoms Diagnosis Treatments

Congestive Heart Failure: Introduction. Congestive heart failure, or CHF, is a very serious condition in which the heart muscle has been damaged. Although the heart continues to beat in congestive heart failure, it is too weak to efficiently pump enough oxygen-rich blood to and from the lungs and the rest of the body.
