Plain Text Pug

Plain Text. Pug provides four ways of getting plain text that is, any code or text content that should go, mostly unprocessed, directly into the rendered HTML. They are useful in different situations. Plain text does still use tag and string interpolation, but the first word on the line is not a Pug tag. And because plain text is not escaped, you can also include literal HTML.

language design Is whitespace optional in SQL queries

I think this is a side effect of the parser. Usually the compilers will ignore white spaces via blocks SKIP, which are tokens ignored by the compiler but that cause errors if in the middle of a reserved word. For example in C: 'while' is valid, 'whi le' is not although the whitespace is a SKIP token.
