Stirling engine Wikipedia

The Stirling engine (or Stirling's air engine as it was known at the time) was invented and patented in 1816. It followed earlier attempts at making an air engine but was probably the first put to practical use when, in 1818, an engine built by Stirling was employed pumping water in a quarry. The main subject of Stirling's original patent was a heat exchanger, which he called an "economiser"

Applications of the Stirling engine Wikipedia

Applications of the Stirling engine range from mechanical propulsion to heating and cooling to electrical generation systems. A Stirling engine is a heat engine operating by cyclic compression and expansion of air or other gas, the "working fluid", at different temperature levels such that there is a net conversion of heat to mechanical work. The Stirling cycle heat engine can also be driven

LTD Stirling Engine The LTD stands for Low Temperature

Similar to a typical Stirling engine an LTD Stirling engine runs when one part of the engine is heated and another part is cooled. LTD is short for Low Temperature Differential.

The Regenerator and the Stirling Engine Allan J Organ

The Stirling engine has been around for almost 200 years however no book has ever been published on the design of Stirling engines. All the various companies developing Stirling engines have been keeping their design methods secret.

FAQ Stirling engine

Questions and Answers: Q: How do Stirling Engines work?A: Stirling engines can be hard to understand. Here are the key points. Every Stirling engine has a sealed cylinder with one part hot and the other cold. The working gas inside the engine (which is often air, helium, or hydrogen) is moved by a mechanism from the hot side to the cold side.

Animated Engines Low Differential Stirling

Low Temperature Differential Stirling Engine. All Stirling engines require that a temperature differential be maintained between the hot and cold parts of the engine. In the 1980s, Professors Ivo Kolin and James Senft developed a series of engines exploring the minimum temperature differential that could be made to work.
