RELATED BOOK :

Amazon com Vertebrate Life 9th Edition 9780321773364

F. Harvey Pough began his biological career at the age of fourteen when he and his sister studied the growth and movements of a population of eastern painted turtles in Rhode Island. His research now focuses on organismal biology, blending physiology, morphology, behavior, and ecology in an evolutionary perspective.

Tooth Wikipedia

A tooth (plural teeth) is a hard, calcified structure found in the jaws (or mouths) of many vertebrates and used to break down food. Some animals, particularly carnivores, also use teeth for hunting or for defensive purposes. The roots of teeth are covered by gums. Teeth are not made of bone, but rather of multiple tissues of varying density and hardness.

Comparative Morphology Development and Function of Blood

Much of our knowledge regarding vertebrate blood and blood cells is based on mammalian references. The critical study of nonmammalian vertebrate blood is relatively new, and comparatively few investigations have been published that focus on these animals' ontogeny and structure-function relationships of blood cells.

Anapsid Wikipedia

An anapsid is an amniote whose skull does not have openings (fenestra) near the temples. Traditionally, the Anapsida are the most primitive subclass of reptiles, the ancestral stock from which Synapsida and Diapsida evolved, making anapsids paraphyletic. It is however doubtful that all anapsids lack temporal fenestra as a primitive trait, and that all the groups traditionally seen as anapsids

All About Archaeopteryx TalkOrigins Archive

Archaeopteryx is a commonly cited example of a transitional fossil. This is disputed by anti-evolutionists, who claim that Archaeopteryx is a complete bird. This FAQ briefly describes the fossils and then discusses the large number of features shared between Archaeopteryx and dinosaurs.
