Compound Interest Investopedia

The Magic of Compounding. The compound interest is the difference between the cash contributed to an investment and the actual future value of the investment. In this case, by contributing \$77,000, or a cumulative contribution of just \$200 per month, over 30 years, compound interest is \$721,500 of the future balance.

Compound interest Wikipedia

Compound interest. The simple annual interest rate is the interest amount per period, multiplied by the number of periods per year. The simple annual interest rate is also known as the nominal interest rate (not to be confused with the interest rate not adjusted for inflation, which goes by the same name).

Compound Interest Maths Resources

r = Interest Rate (as a decimal value), and n = Number of Periods . And by rearranging that formula (see Compound Interest Formula Derivation) we can find any value when we know the other three: $PV = FV(1+r)^{-n}$. Finds the Present Value when you know a Future Value, the Interest Rate and number of Periods. $r = (FV/PV)^{(1/n)} - 1$
