HVAC control system Wikipedia

HVAC (Heating, Ventilation and Air Conditioning) equipment needs a control system to regulate the operation of a heating and/or air conditioning system.Usually a sensing device is used to compare the actual state (e.g. temperature) with a target state. Then the control system draws a conclusion what action has to be taken (e.g. start the blower).

How Does an HVAC System Work HVAC Basics Explained

Thermostat: This is the most obvious portion of your HVAC system, and the piece you'll interact with most. Usually installed on an easily accessed wall, it can be set manually and programmed to keep your home at your ideal temperature. When the ambient temperature gets too hot or cold, the thermostat triggers your HVAC system to start circulating air as needed.
