### **Bee Wikipedia**

The ancestors of bees were wasps in the family Crabronidae, which were predators of other insects. The switch from insect prey to pollen may have resulted from the consumption of prey insects which were flower visitors and were partially covered with pollen when they were fed to the wasp larvae.

### **Stingless bee Wikipedia**

Stingless bees, sometimes called stingless honey bees or simply meliponines, are a large group of bees (about 500 species), comprising the tribe Meliponini (or subtribe Meliponina according to other authors). They belong in the family Apidae, and are closely related to common honey bees, carpenter bees, orchid bees, and bumblebees. Meliponines have stingers, but they are highly reduced and

### **Winter feeding of honey bees Honey Bee Suite**

I deally, honey bees should not have to be fed in the winter. But sometimes nature conspires against us and our colonies are plunged into winter with insufficient stores of honey. How much honey they need depends on the local climate and weather conditions, the size of the winter cluster, and the variety of bee.
