#### Compound vs Recurve Bow Which is Best How to Survive It

Recurve and compound bows are similar in some respects because they both have strings and arrows, but the similarities end there. Much like the AR-15 vs AK-47 debate, archers are embroiled in an everlasting debate over whether a compound or recurve bow is better. The fact is that both deliver entirely different pros and cons. http://ebookslibrary.club/download/Compound-vs--Recurve-Bow--Which-is-Best--How-to-Survive-It.pdf

# Composite bow Wikipedia

A composite bow is a traditional bow made from horn, wood, and sinew laminated together, cf. laminated bow. The horn is on the belly, facing the archer, and sinew on the outer side of a wooden core. When the bow is drawn, the sinew (stretched on the outside) and horn (compressed on the inside) store more energy than wood for the same length of bow.

# **Bowstring Wikipedia**

A bowstring joins the two ends of the bow stave and launches the arrow. Desirable properties include light weight, strength, resistance to abrasion, and resistance to water. Mass has most effect at the center of the string; one gram (0.035 oz) of extra mass in the middle of the string slows the arrow about as much as 3.5 grams (0.12 oz) at the ends.

#### The Difference Between a Longbow and Recurve Bow

Also Read Compound Bow vs. Traditional Bow. A long bow is a forgiving bow. Its main difference from a recurve is its shape. A long bow is the traditional half-moon shape with a straight grip.
